# Service 01

## Offshore Engineering Dredging & Consultation

Selah marine oil and Gas Limited provides expert engineering service to support offshore oil and gas development. In our attempt to deliver optimum solutions, we follow safe and effective processes to perform consistently, and also protect the environment from being harmed in any way.

We at selah marine are recognized by the industry for our expertise in Global Performance, Topsides Layout, Hull and Deck Structures, Hull Marine Systems, Naval Architecture and Hydrodynamics, Mooring Systems, Riser Systems and Construction Support.

Our Consulting Division provides company representatives and/or supervisors to manage the rigs and platforms of our clients, the operator. Our supervisors oversee a variety of jobs and represent the needs of the client on location.

## **DREDGING**

Selah Marine has the capacity to carry out the activity in dredging and solving coastal erosion problems through the design and implementation of shore line protection techniques. Our capabilities and approach allow us to execute projects on time and on budget in the logistically challenging terrain of the Niger Delta with a perfect understanding of the environmental and communal sensitivities associated with these demanding

## **Shoreline Protection/Reclamation Land Reclamation**

The protection of coasts and shores, are our most visible activities. Our projects contribute to the economic development of the Niger Delta. We are an indigenous company that can work in any part of the Niger delta Region. We also welcome and promote healthy relationships with foreign partner in terms of technology, labour workforce and financial ability to ensure the very best end product for our Clients.

## Pipeline Supply

At Selah Marine Oil & Gas we proudly specialize in sourcing rare and non-conforming pipeline material. It is our aim to supply the world offshore, marine, oil and gas, shipbuilding and conversion industries with the best quality pipes, tubes and fittings at the most competitive prices and in the quickest possible time.

## Cable lay systems

Selah Marine has a range of cable lay engines for the laying of cables in deep water. The range includes multi-wheeled linear, drum engines and the unique safe fleet drum cable engine (SFDCE) for holding up to 40t back tension with electric or hydraulic drives. The SFDCE uses a unique fleeting system, which makes it very suited to deploying sensitive cables rapidly without the need for mechanical knives or rings which can damage the cable.

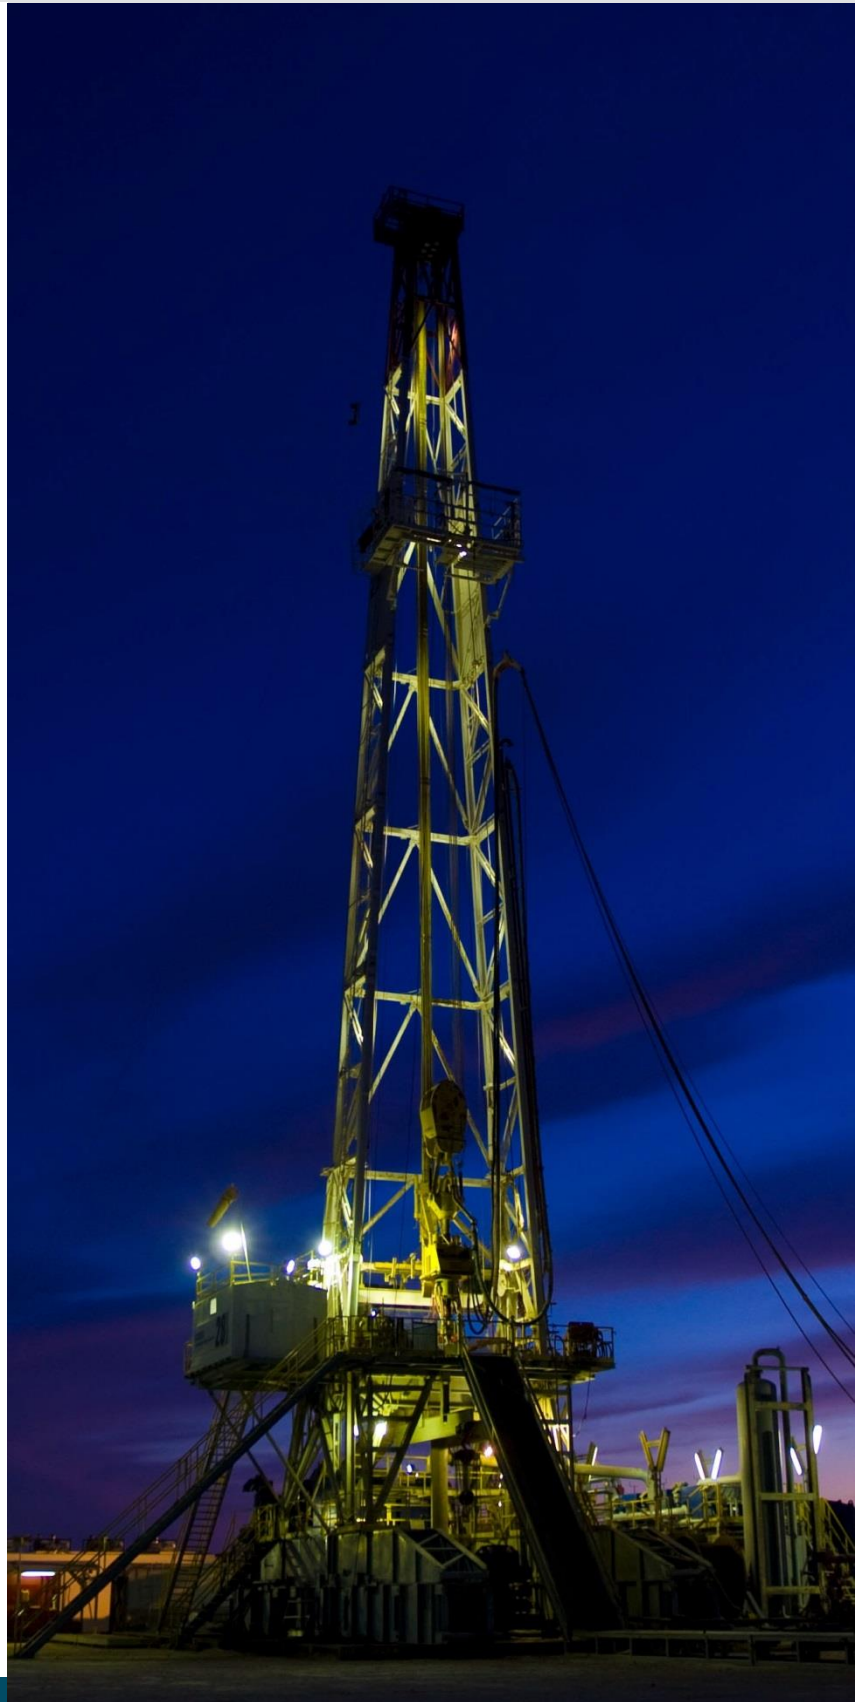

## Service 02

Offshore supply of  
Pipeline and Cable  
Lay Equipment

***A significant risk to reliable drilling operations is the malfunction of equipment and systems.***

These interruptions result in non-productive time (NPT) which is costly but avoidable. Operational safety relies on being detail oriented, the integrity of your equipment could mean the difference between success and operational failure.

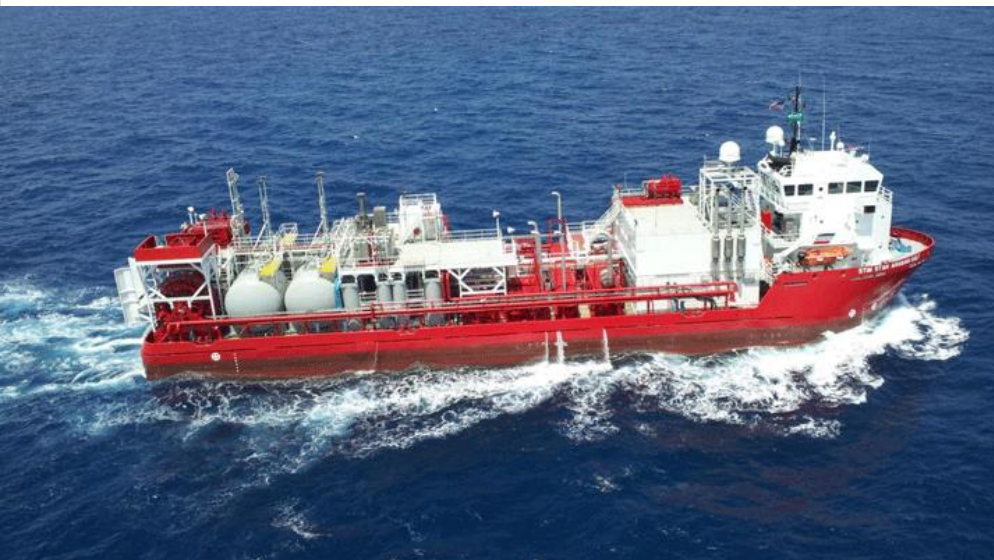

Selah Marine is experienced in providing the best possible service to our clients whatever their requirements. We offer a diverse range of specialized knowledge and experience of rig safety, inspection and maintenance with the aim of providing a prompt, efficient and tailored service to meet clients' needs. Selah Marine's reputation in the oil and gas industry is of the highest standard in terms of quality and service, and we adopt a very serious approach to providing quality service, maintaining its outstanding industry reputation within the oil and gas industry. We provide a global service in Offshore Rig survey on all aspects of Rope Access, Non Destructive Testing (NDT), Fabric Maintenance and Project Management to the Oil and Gas and Renewable Energy industries both Onshore and Offshore, with highly skilled and motivated personnel.

Selah Marine's specialized services enable clients to obtain the maximum efficiency out of surveyors and inspectors, as they are dedicated to their specific needs. Our surveyors and inspectors are on call 24/7 specifically to provide for and assist in the following services within the oil and gas industry:

- Rig acceptance and safety surveys
- Rig condition and benchmark surveys
- Pre-shipyard evaluation surveys
- Commissioning and project engineering
- Equipment condition evaluation and inspection
- Subsea and surface well control equipment inspection
- QA services and project management
- Oil country tubular goods (OCTG)
- Lifting and lifted equipment inspection
- Pre-load out inspection

- + background verification process;

### Recruitment and placement

- + sourcing;
- + screening;
- + interviews and selection;
- + recruitment drives;
- + background verification process;

## Service 04

Supply of  
Qualified  
Personnel

*In this area of business, our key objective is the marketing and sales of Crude and refined oil in the supply chain management focusing on relationship development and market expansion of oil products. We are a solution provider in the procurement of energy, industrial and mineral product.*

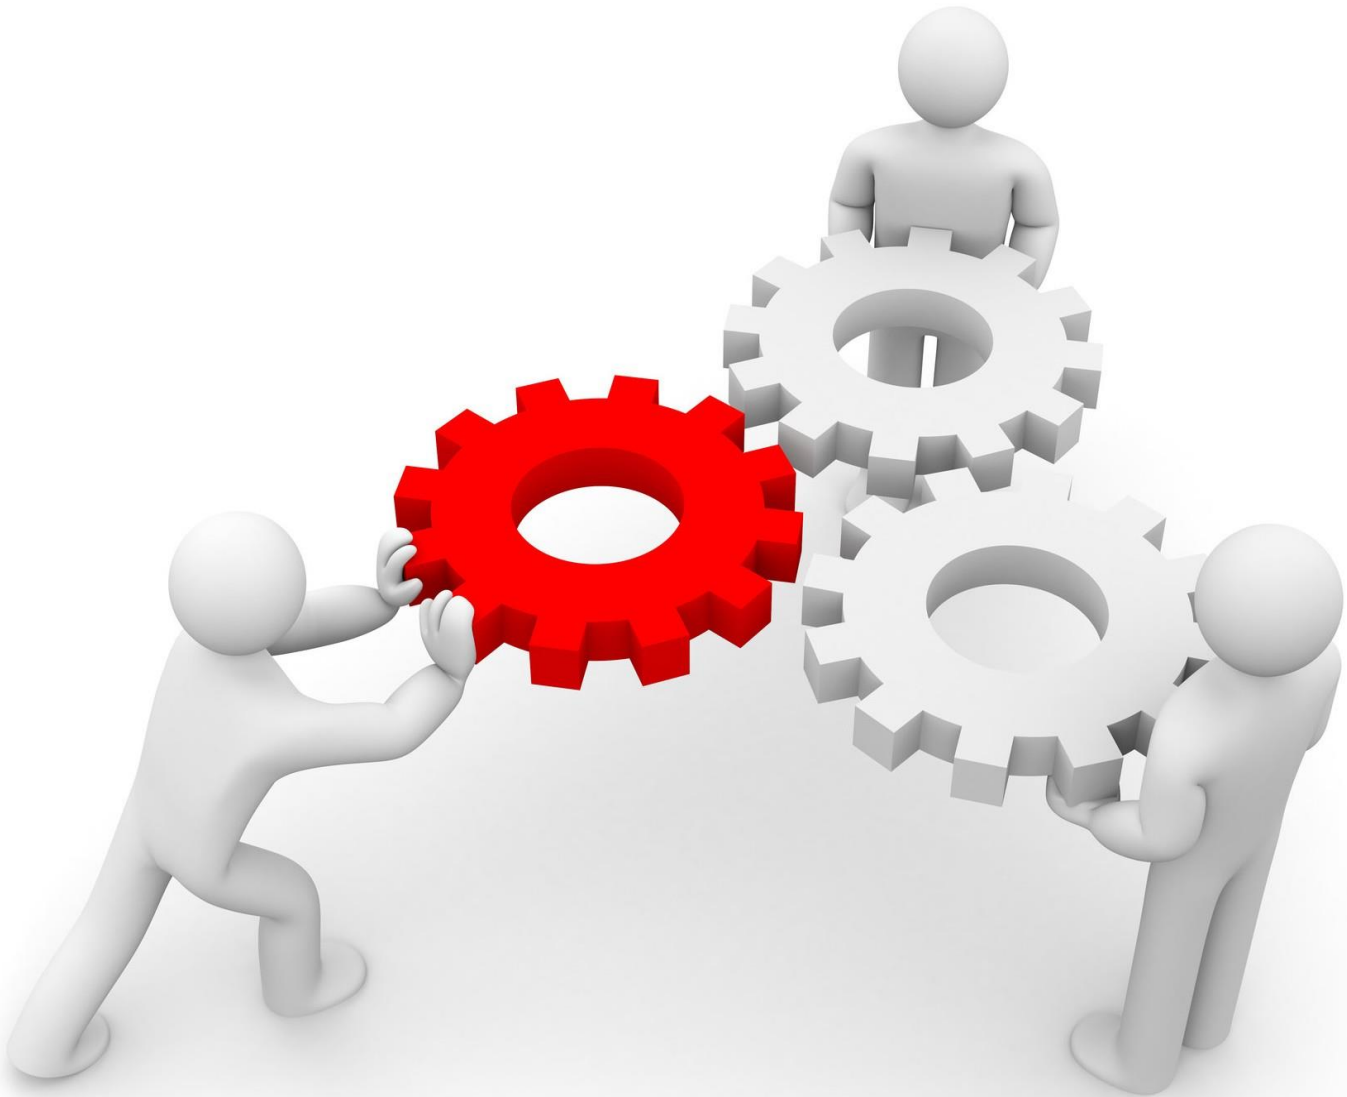

We function both as a relationship intermediary and product management mandate focusing on Petroleum products. From our perspective, the major challenge in the trading of commodity is TRUST! This commences immediately with the initial contact where the buyer requires a Soft Offer, the Seller requires an LOI. Inevitably at this early stage neither side wishes to divulge much information.

Having overcome this hurdle we then enter the phase of proof of sincerity in which the seller requires a bank soft probe, POP. etc. Our expertise enables us to guide both seller and buyer through these difficult negotiations of crude and refined product.

## Service 05

Crude & Refined  
Oil Marketing  
& Sales

***Aside the specifically listed services above, we also provide consulting services to our vast client base in other areas of the oil and gas sector including:***

- + Providing safety equipment for offshore workers
- + Onshore/offshore transportation
- + Fender services
- + Ship securing
- + Marine consultancy
- + Diving
- + Support Services
